

ICE SLICER® RS

Specifications:

Ice Slicer RS meets the following gradation requirements:

Sieve Size	-	% Passing
3/4"		100
#4		20-100
#8		10-70
#30		0-25

Properties	Analysis
Total Moisture Percentage	Up to 3 %
Weight Per Cubic Foot	~ 75 lbs.
Weight Per Cubic Yard	~ 2,025 lbs.

Ice Slicer RS is a fast-acting deicing compound, ideal for general highway and street deicing. In the first 30 minutes after application, Ice Slicer RS effectively melts more snow and ice than white salt, and Ice Slicer RS contains a natural blend that will not stain concrete or asphalt. Ice Slicer RS is easier on equipment and infrastructure — at least 20% less corrosive than white salt.

Ice Slicer RS is a blend of 92%-98% complex chlorides (sodium, magnesium, calcium, potassium) with anti-caking and anti-freezing agents that won't leach. Apply with a V-box spreader. Ice Slicer RS can be ordered bulk, or in 2,000 and 2,500 lb super bags. RS can be kept outside, but it's best to store covered to maximize performance.

Ice Slicer RS is an OMRI-certified organic blend mined from a halite deposit in Southern Utah. The perfect blend of complex chlorides, along with trace minerals like calcium, iron, magnesium, manganese, phosphorous, potassium and zinc, help buffer the effects of sodium chloride on vegetation and the environment.
